Allowance of Application # 09/815,129

1. The following communication is in response to applicant's Amendment, received 6-August-2004.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the invention described in U.S. Patent No. 5,966,603 to Eitan. The improvement comprises a macro model of a programmable NROM for simulating the character of the NROM, wherein the NROM comprises: a substrate, a drain located in the substrate, a source located in the substrate and a gate electrode located on the substrate between the source and the drain; the gate comprising a first oxide layer, a nitride material layer, a second oxide layer and polysilicon layer, whereby when the programmable NROM is under a forward reading operation mode, charges are trapped in the nitride material layer close to the drain to form a charge trapped region.

This patentable distinction is included in each of the independent claims, nos. 1 and 2. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible *macro model of a programmable NROM for simulating the character of the NROM* having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 5, line 9 through page 9, line 12, and Figures 1-5B. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
